ABSTRACT

Centrally-collected data were the basis of this report on first-time freshmen applications and enrollments at The City University of New York during the 1975-1976 period, in which, due to financial problems, changes were made at CUNY regarding tuition imposition, new retention standards, and new admissions criteria. The data are presented in these categories: fall 1975 applications compared with fall 1976, 1975 enrollment compared with 1976, allocation-enrollment, enrollment by college, and special programs. Major findings include: a 16 percent decline in freshmen applications, most in the senior colleges with the community college enrollment about the same; greater decreases among senior college freshmen who were affected by the new academic standards; increases in freshmen enrolled in SEEK and College Discovery programs, which reflects the new SEEK eligibility criteria and contributes to senior college heterogeneity as measured by race-ethnicity and median family income of students' residential area. MAJOR FINDINGS

Analyses of data on applications and enrollments among first-time freshmen in Fall 1975 and in Fall 1976, when tuition and other regulations and policy changes were introduced at CUNY, indicates the following:

- freshmen applications declined 16.0% from 1975 to 1976, thus reversing a trend of several years (Table 1);
- in both 1975 and 1976, applicants that were allocated to their first choice college were more likely to enroll than applicants allocated to other choices (Table 10);
- twenty-six percent fewer first-time freshmen enrolled in Fall 1976 than in Fall 1975, with the largest decrease (47.0%) occurring among those with low (under 70) college admissions averages (Table 5);
- almost all of the decline in freshmen enrollment took place at the senior colleges (48.3% fewer in 1976 than 1975, Table 6); the number of freshmen enrolled at community colleges was almost the same in both years (Table 7);
- there were proportionately greater decreases among senior college freshmen who had CAAs below 80 or who ranked below the 65th percentile in their high school class (Table 6); these changes reflect the new CUNY admissions criteria and suggest that the 1976 freshmen were a more academically-select group than the 1975 freshmen (also see Table 8);

- among the community colleges, LaGuardia CC and Borough of Manhattan CC showed the largest proportional increases in freshmen; Staten Island CC and Bronx CC showed the largest proportional decreases (Table 11);
- first-time freshmen enrollment decreased at every senior college, with York College and Lehman College showing the largest proportional decreases (Table 11);
- from 1975 to 1976, there was an increase in freshmen enrolled in SEEK (Table 12) and College Discovery (Table 13) programs who had CAAs below 75 or who ranked below the 25th percentile in their high school class; these changes reflect the new SEEK eligibility criteria;
- SEEK contributed to the heterogeneity of the senior colleges in 1975 and 1976, as measured by race-ethnicity and median family income of students' residential area (Table 12).

APPLICATION AND ENROLLMENT OF CUNY FRESHMEN:
FALL 1975 vs. FALL 1976

INTRODUCTION

This report, based on data collected centrally,* concerns first-time freshmen applications and enrollments at The City University of New York in the Fall 1975 and Fall 1976 semesters. This period, 1975-1976, was significant in the history of CUNY. During the Spring of 1976, for example, the fiscal problems of New York City created a climate of uncertainty for some about the future of the University, both in terms of its funding and size. Moreover, several regulatory and policy changes were implemented by the University beginning with the Fall 1976 semester. Among these were the imposition of tuition, new retention standards, and new admissions criteria. With regard to the latter, senior college admission (except for those allocated to the SEEK program) was available to those applicants with a college admissions average (CAA**) of at least 80 percent or who ranked in the upper 35 percent of their high school class;*** admission to the community colleges was available to those with a CAA of at least 70 percent or who ranked in the upper 75 percent of their high school class, as well as to those presenting equivalency certificates and those students in College Discovery;

*Application data were provided by the University Applications Processing Center (UAPC); enrollment data are routinely collected by the Office of Program and Policy Research (OPPR) from the colleges of CUNY. Only first-time freshmen matriculants who applied through the UAPC are described in this report; nonmatriculants and so-called "direct admits" who apply directly to the colleges for admission are excluded.

**CAA is the average of grades earned in high school academic courses.

***The CAA requirement was later modified for John Jay, Lehman and York Colleges.

applicants failing to meet either of these criteria were admitted to a community college in a transitional program.

Freshmen enrollment figures, more so than college-wide enrollment figures, may be a better reflection of student reactions to the imposition of tuition and the new regulations. Those already enrolled, especially upperclassmen, may continue in spite of the tuition charge and other changes because of their "investment" in a particular program or college.

APPLICATIONS: FALL '75 vs. FALL '76

First-time freshmen applications decreased 16.0% university-wide (Table 1), thus reversing a trend of several years (e.g., first-time freshmen applications increased 27.2% between 1969 and 1970, and increased 17.2% between 1970 and 1974).^{*} The largest decrease, 40.0%, occurred among applicants with low (under 70) CAAs, perhaps reflecting the impact of the new admissions criteria; from 1969 to 1970, when the open admissions policy was implemented, and from 1970 to 1974, the largest

^{*}cf. Rena Kramer, Barry Kaufman, and Lawrence Podell, Application, Allocation, and Enrollment of Freshmen by Residential Area, 1969-1972, New York: City University of New York, 1974; Barry Kaufman, Robert Terdeman and Susan Loveland, Application, Allocation, and Enrollment of CUNY Freshmen: 1970-1974, New York: City University of New York, 1976. The data in this report and the earlier ones are not comparable. Since the University instituted a one-session concept in Fall 1976, day and evening session freshmen enrollments were combined for Fall 1975. However, the earlier (1969-1972 and 1970-1974) reports dealt only with first-time freshmen in the day session of CUNY.

increase in applications, 159.8% and 49.0%, respectively, occurred among those with CAAs under 70. University-wide, there were also proportionately larger decreases among applicants ranked below the 25th percentile in their high school class, from minority neighborhoods,* from public high schools with the lowest average scores (Group IV) on the state regents scholarship examination, and from private Catholic high schools.

Data on applications to the senior colleges and the community colleges are contained in Table 2 and Table 3.

ENROLLMENT: FALL '75 vs. FALL '76

Given the decrease in applications from 1975 to 1976, it is not surprising to find a decrease in enrollments, as well. (It should be noted that the decision to impose tuition was made in May 1976, after most applications had been filed.) In addition, the proportion of applicants that enrolled at CUNY decreased from 58.6% in 1975 to 51.6% in 1976 (Table 4).

University-wide, first-time freshmen enrollment decreased 26.2% (Table 5), reversing a trend of several years (e.g., first-time freshmen enrollment

*Data on individual students' race-ethnicity or family income are not available; instead, their addresses (ZIP codes) have been categorized utilizing the 1970 U.S. Census statistics to describe the predominant characteristics of their neighborhoods.

increased 16.0% from 1970 to 1974). The largest decrease, 47.0%, occurred among freshmen with low (under 70) CAAs; (from 1970 to 1974, enrollment of freshmen in this category increased 52.3%). There were also proportionately larger declines among freshmen ranked below the 25th percentile in their high school class and from private Catholic high schools. However, there was little difference in the decline of freshmen by residential race-ethnicity predominance or family income area characteristics or by rank of public high school (based on the average school score on the state regents scholarship examination).

The number of first-time freshmen enrolled at community colleges (Table 7) was almost the same in Fall 1976 as in Fall 1975. The proportionately larger decline in freshmen with below 70 CAAs may reflect the climate inspired by the new admissions regulations, while the increase in freshmen with CAAs between 70 and 79 may represent students who, in Fall 1975, may have enrolled at senior colleges, but could not do so in Fall 1976. With the exception of those with low (under 70) CAAs, the composition (percent distributions) of community college freshmen was very similar in Fall 1975 and in Fall 1976.

The senior colleges presented a very different picture. First-time freshmen enrollment declined 48.3% from Fall 1975 to Fall 1976 (Table 6). As mentioned previously, the Fall 1976 senior college admissions criteria limited admissions to those with CAAs of at least 80% or ranked in the upper 35 percent of their high school class. Consequently, from 1975 to 1976 there were proportionately greater decreases among senior college freshmen with CAAs below 80% (a 64.7% decline, com-

pared to 30.6% among those with CAAs of 80 and above) and ranked below the 65th percentile in their high school class (67.9% vs. 27.2% among those at or above the 65th percentile). In addition, there were proportionately greater decreases among those from public high schools with higher average scores on the state regents scholarship examination (48.0% vs. 38.0% from high schools with lower average scores), from public high schools whose graduating class was predominantly white (54.8%), and from private Catholic high schools (52.1%).

There were also somewhat larger proportionate decreases among freshmen from middle income areas, whether predominantly minority (a 55.5% decrease) or predominantly white (a 49.2% decrease), possible reflecting the reaction to tuition. But the decrease in students from middle income areas was not that much greater than the decrease in students from lower income areas; it is possible that different forces acted to cause similar proportionate reductions in each case -- tuition in the former and higher admissions standards in the latter.

The composition of the senior college freshmen changed as regards CAA and percentile rank in high school: 64.5% of the 1976 freshmen entered with CAAs at or above 80, compared to 48.0% in 1975; 74.5% of the 1976 freshmen ranked at or above the 65th percentile in their high school class, compared to 56.3% in 1975. However, distributions by sex, race-income of residential area, type of high school (public vs. private) and their ranking on the regents scholarship examination were similar in 1975 and 1976.

The new senior college regulations did result in proportionately more freshmen with greater high school achievement. The impact of the new admissions criteria on the distribution of senior college freshmen can be seen from the data in Table 8. In 1975, 44.2% of the senior college first-time freshmen had CAAs at or above 80 and ranked at or above the 65th percentile in their high school class; the corresponding figure in 1976 was 57.5%. While there were fewer senior college freshmen in 1976 than in 1975, they appear to have been a more academically-select group. In contrast, the community colleges remained quite similar in this regard from Fall 1975 to Fall 1976. It should also be noted that the CUNY-wide distribution of freshmen by CAA and percentile rank was virtually the same in 1975 and 1976. (Additional data on applicants and enrollees from individual NYC public high schools and private high schools are contained in Appendix A.)

ALLOCATION-ENROLLMENT

The extent to which applicants were allocated to the college of their first choice is shown in Table 9. Among applicants to the senior colleges, the percentages that were allocated to their first choice declined in every CAA category between 1975 and 1976; this did not occur among applicants to the community colleges. In addition, as very few of the community college programs impose CAA cut-off points, applicants to the community colleges at each CAA level were more likely to be allocated to the college of their first choice than were applicants to

the senior colleges.*

It may be seen from Table 9, the higher the CAA, the more likely were applicants to be allocated to their first choice college. (The fact that, in both years, senior college applicants with CAAs of below 70 were more likely to be allocated to their first choice than applicants with CAAs between 70-74 and 75-79 apparently reflects the allocation of SEEK students.)

The relationship between allocation to first choice college and enrollment is shown in Table 10. In both 1975 and 1976, applicants that were allocated to their college of first choice were more likely to enroll than applicants allocated to other choices. This is especially true for the community colleges, application to which may be more affected by considerations of residential proximity and career program uniqueness.

ENROLLMENT BY COLLEGE

Distributions and percent changes in first-time freshmen for each of the senior colleges and community colleges of CUNY are presented in Table 11. Among the community colleges, the largest proportional increases in freshmen occurred at LaGuardia CC (26.2%) and Borough of Manhattan CC (23.1%); the largest proportional decreases occurred at

*Every senior college imposed cut-points, which varied from institution to institution. Thus an applicant with a CAA of 80 would qualify for admission to the senior colleges, but would not necessarily be allocated to the college of his/her first choice if its cut-point were above 80%.

Staten Island CC* (24.2%) and Bronx CC (21.2%). Freshmen enrollments decreased at all the senior colleges from Fall 1975 to Fall 1976, with York College and Lehman College showing the largest proportional decreases, 76.3% and 70.5%, respectively. (Appendices B through F provide freshmen enrollment data by college and CAA, percentile rank in high school, residential area characteristics, race-ethnicity of high school graduating class, type of high school.)

SPECIAL PROGRAMS

The freshmen enrollment data presented in previous sections of the report do not differentiate between those enrolled in regular programs and those enrolled in special programs. Special programs, i.e., College Discovery (CD) at the community colleges and SEEK at the senior colleges, are designed to assist students from educationally and economically disadvantaged backgrounds. Comparisons of enrollment, Fall 1975 and Fall 1976, in regular and special programs are provided in Table 12 (senior colleges) and Table 13 (community colleges).

From 1975 to 1976, the enrollment of CD students with higher (at or above 75) CAAs and of higher (at or above 25th) percentile rank decreased, reflecting changes in the CD eligibility criteria (described on p.10); this was not the case among regular students (Table 13),

*Beginning with the Fall 1976 semester Staten Island CC and Richmond College were merged to become the College of Staten Island.

Thus, in 1975, 70.2% of the regular students and 66.4% of the CD students had CAAs at or above 70; in 1976, 81.7% of the regular students and 58.5% of the CD students had CAAs at or above 70. Within the other classifications of community college freshmen, the percentage distributions in Fall 1976 showed only slight changes from those in Fall 1975.

First-time senior college freshmen enrolled in regular programs decreased 54.6% from 1975 to 1976; this was not true for SEEK first-time freshmen, whose overall enrollment remained virtually the same (Table 12). However, because of the sharp decrease in regular student enrollment, students enrolled in SEEK increased their proportion of senior college freshmen from 11.0% in 1975 to 22.0% in 1976.

There were proportionately greater decreases among regular senior college freshmen with lower CAAs and lower percentile rank, but there were increases among SEEK freshmen with lower CAAs and lower percentile rank. This situation reflects the new senior college admissions criteria and new SEEK-CD eligibility criteria resulting in opposite effects. Thus, while either a CAA of at least 80 percent or a percentile rank of at least 65 percent was required for admission to the regular programs of the senior colleges, eligibility for the SEEK (and the CD) program was based on either having a CAA of less than 75 percent and no more than ten academic units, or possessing a general equivalency diploma. Moreover, while the enrollment of both regular and SEEK students from minority neighborhoods decreased, the enrollment in SEEK of students from white neighborhoods increased. This, again, reflects changes in the SEEK eligibility criteria: prior to 1976, students had to reside in one of

New York City's poverty areas in order to be eligible for SEEK; in 1976, selection for SEEK was available to all educationally and economically disadvantaged residents of New York City, regardless of area.

The impact of the new regulations is most dramatically demonstrated in the composition of regular and SEEK freshmen, which changed substantially between 1975 and 1976 and made the differences between the two groups of students even more pronounced. In Fall 1976, for example, the proportions of regular students with high (80 and above) CAAs and high (65th or above) percentile rank were 80.6% and 85.1%, respectively; the corresponding figures for SEEK were 1.8% and 11.8%. Of SEEK freshmen, 93.8%, had CAAs below 75 compared to 4.4% of regular freshmen. However, in both 1975 and 1976, SEEK was an integrating influence, both racially and socio-economically, on senior college enrollment. In 1976, 16.5% of regular students but 51.1% of SEEK students came from predominantly minority areas; and 19.1% of regular students, but 55.8% of SEEK students, came from low income areas.

Data on special program eligibility, allocation, and enrollment are provided below. Applicants who were eligible for and allocated to special programs were more likely to enroll than either those eligible but not allocated or those not eligible; the enrollment rate among those eligible but not allocated to special programs and those not eligible was about the same. From 1975 to 1976 there was a significant decrease (from 9,705 to 522) in the number of applicants that were eligible for but not allocated to special programs. However, the previously described change in the SEEK-CD eligibility criteria sharply

limited the pool of eligible applicants in 1976, compared to 1975.

	ELIGIBLE FOR SPECIAL PROGRAMS		NOT ELIGIBLE
	Allocated to Special Programs	Not Allocated	
<u>1975</u>			
Number Applied	5,672	9,705	48,550
Percent Enrolled	67.5	58.7	57.6
<u>1976</u>			
Number Applied	5,925	522	47,171
Percent Enrolled	62.9	49.2	50.2

This report, based on centrally-available data, has described the application and enrollment of first-time freshmen at the City University of New York in the Fall 1975 and Fall 1976 semesters. From 1975 to 1976, when tuition and other regulatory and policy changes were introduced at CUNY, freshmen applications and enrollments declined, especially at the senior colleges. Although this represents a change from previous years, it is too soon to know whether it represents a trend; this will be better understood when data for the Fall 1977 semester are analyzed.

*Figures in parentheses indicate a decrease

**Medgar Evers College is included in the community college figures in 1975 and 1976, even though its students were enrolled in SEEK in both years

Table Footnotes

1. The first-time freshmen of this report are defined as those students who applied for admission through the UAPC and were identified as matriculants on the college Show-Registration tapes. Since the University instituted a one session concept in Fall 1976, day and evening sessions were combined for Fall 1975. Excluded from the data are first-time freshmen who applied directly to the colleges for admission.
2. The total number of students in each classification may not equal the CUNY, SC, or CC totals due to missing or inapplicable data.
3. CAA is the college admissions average. It is computed from grades received in the following high school subjects: English, foreign language, mathematics, science, and social studies.
4. HS Percentile Rank is the student's scholastic rank in his/her high school class.
5. Data on race-ethnicity and family income are not part of the student's record. In order to get some indication of these attributes, data from the 1970 U.S. Census were used to categorize applicants' residential areas (ZIP codes) according to the predominant race-ethnicity and median family income. The income categories were: High, $\geq \$12,000$; Middle, $\geq \$8,000$ < $\$12,000$; Low, < $\$8,000$. Applying the 1970 Census data to these areas in the years 1975 through 1976 may entail additional inaccuracies.
6. Data were available on the ethnic distribution, by grade level, of New York City public high schools. Based on the Fall 1975 twelfth grade enrollment (June 1976 graduates), the schools were classified as follows:
 - Predominantly ($\geq 70\%$) White and Other
 - Mostly ($\geq 55 < 70\%$) White and Other
 - Predominantly ($\geq 70\%$) Black
 - Mostly ($\geq 55 < 70\%$) Black
 - Mostly ($\geq 55 < 70\%$) Hispanic
 - Predominantly Minority (≥ 70 but < 55% either Black or Hispanic)
 - Mostly Minority (< 55% either Black or Hispanic, but $\geq 55 < 70\%$ Black and Hispanic combined)

The classification of high schools for 1975 and 1976 freshmen was based on the twelfth grade ethnic distribution in Fall 1975 (June 1976 graduates); data for Fall 1974 were not readily available.

7. Data were available for public high schools in New York City describing the average score their students attained in the State Regents Scholarship Examination. These schools were ranked and classified: Group I schools had the highest average scores and Group IV schools had the lowest average scores. The classification of high schools for 1975 and 1976 freshmen was based on the scores of students taking the exam in Fall 1974 (June 1975 graduates); data for Fall 1975 were not readily available. Data were missing for several schools and the proportion of students taking the examination varied from school to school. The classification of NYC public high schools was developed as a descriptive tool for research purposes only.

The classification "Other" high school includes students from outside NYC, those with high school equivalency diplomas (GEDs), and those for whom high school data was missing.
